Event Replay & Generation Guard | Boundary & Scope

Public one-page pre-contractual terms | EUR 4,500 | 08 Nov 2026

Purpose and deliverable

Local duplicate and stale-generation admission, sequence checks and bounded checkpoint recovery. Outcome may be GO, NO-GO or INCONCLUSIVE; no positive result is guaranteed.

Exactly included

One approved consumer/stream with bounded replay trace, isolated environment and 30 paired attempts where feasible. One optimized agreed competitor and exact correctness oracle. Up to 30 paired attempts per feasible configuration and scenario. Unsupported capabilities explicitly marked NOT TESTED.

One 45-minute kickoff and one 45-minute results call; one 8-12 page evidence dossier, paired deltas, aggregate figures, SHA-256 manifest and reproducibility notes; one clarification email thread within five business days.

Commercial timing and payment

Fixed EUR 4,500 plus applicable taxes per signed quote. 50% at signature, 50% on deliverable. Target ten business days after all agreed inputs are accepted. Missing client inputs pause the schedule.

Extra work requires signed authorization

Further calls, datasets, environments, comparator installations, test reruns, cloud/lab charges and any engineering changes need a separate fixed-price written change order.

Expressly excluded

No source changes, application edits, production access/deployment, Kubernetes operations, general architecture advisory, ongoing support, incident response, on-call, certification, guaranteed savings or proprietary IP licence.

Acceptance and ownership

Correct delivery of agreed outputs fulfills the diagnostic even if NO-GO. Customer keeps its private data; independent researcher retains algorithms, source, designs, tools and know-how. No publication of customer traces.

Public terms are a nonbinding preview; only a mutually signed quote and required privacy/legal terms create obligations.
